

## ATM PROJECT

```
class ATM:
    def __init__(self, name, balance) :          #double underscore => dunder
        self.name = name
        self.balance = balance

    def check_balance (self):                    #balance
        message = f"Account:{self.name}, Balance: {self.balance}"
        print (message)

    def deposit (self, money) :                  #deposit
        self.balance +=money
        print (f"New Balance :{self.balance}")
        print ("Deposit sucessfully")

    def change_name(selfself,new_acc_name):      #change name
        self.name = new_acc_name
        print ("Your account sucessfully change")
```

## TEST

```
scb=ATM("boom",5200)
```

```
scb.check_balance()
```

```
Account:boom, Balance: 5200
```

```
scb.deposit(500)
```

```
New Balance :5700
Deposit sucessfully
```

```
ttb=ATM("John" , 15000)
```

```
ttb.check_balance()
```

```
Account:John, Balance: 15000
```
